

A.K.Saravanan

Aquaponics India

A.K.Saravanan is an Energy Engineer and is the CEO & Founder of The Aquaponics India. Coming from an Energy background, Saravanan was researching & inventing various energy saving products & services that could benefit not just the mankind but also conserve our mother nature.

He stumbled upon AQUAPONICS while searching for methods for reducing land & water wastage, labour shortage, cost & sustainable productivity in farming. Aquaponics seems to be the only solution to organically grow food (Fish & Plants) without soil, less water, less labour, less space & sustainable production. He set up a Research & Development facility in Tatabad, Coimbatore, and found more new methods for urban & commercial aquaponics farming. He realised that his motto is to spread the awareness of Aquaponics to every human population so that every human being will grow their own organic food, live a disease-free healthy life and also preserve our earth's ecosystem by not polluting it with harmful pesticides.
